

Andrei Zabelin

Full Stack Engineer

👤 Profile

Starting from university I used to apply in practice programming languages, data structure and algorithms for see how program do the job. With this mindset I get in web-programming world. During my career I got experience in many directions like business logic implementation, design database schemes, structuring and optimization of components, apply design patterns, code refactoring, sql optimizations, etc.

As a team leader and project manager I have experience in define and delegation of tasks based on design/templates/frontend/backend, sprint planning, unify modules, tendency to obtain a result as high quality as possible.

I believe the key of success it's a strong defined goal, good plan, focus on the result and efficient communication in the process.

🏢 Employment History
